How to spend it: A proposal for a European Covid-19 recovery programme

<u>Jérôme Creel, Mario Holzner, Francesco Saraceno, Andrew Watt</u> and Jérôme Wittwer^[1]

The Recovery Fund recently proposed by the EU Commission marks a sea-change in

European integration. Yet it will not

be enough to meet the challenges Europe faces. There has been much

public debate about financing, but little about the sort of concrete projects

that the EU should be putting public money into. We propose in Policy

<u>Brief n°72</u> a 10-year, €2tn investment programme focusing on public health,

transport infrastructure and energy/decarbonisation.

The investment programme consists of two pillars. In a national

pillar Member States — broadly as in the Commission proposal — would be

allocated €500bn. Resources should be focused on the hardesthit countries and

front-loaded: we suggest over a three-year horizon.

The bulk of

the money — €1.5tn — would be devoted to finance genuinely European projects, where there is an EU value added. We describe a series of flagship initiatives that the EU could

launch in the

fields of public health, transport infrastructure and energy/decarbonisation.

We call for

a strengthened EU public health agency

that invests in health-staff skills and then facilitates their flexible

deployment in emergencies, and is tasked with ensuring supplies of vital

medicines (Health4EU).

We present

costed proposals for two ambitious transport initiatives: a dedicated European

high-speed rail network, the Ultra-Rapid-Train,

with four-routes cutting travel times between EU capitals and regions, and,

alternatively, an integrated European

Silk Road initiative that combines transport modes on the Chinese model.

In the area

of energy/decarbonisation we seek to "electrify"

the Green Deal. We call for funding to accelerate the realisation of a

smart and integrated electricity grid for 100%-renewable energy transmission (e-highway), support for complementary battery and green-hydrogen projects, and a programme, modelled on the SURE

initiative, to co-finance member-state decarbonisation and Just Transition policies.

The crisis

induced by the pandemic, coming as it does on top of the financial and euro

crises, poses a huge challenge. The response needs to take

account of the

longer-run structural challenges, and above all that of climate change. The

European Union should rise to these challenges in the reform of an ambitious medium-run recovery programme,

appropriately financed. An outline of such a programme is set out here

by way of illustration, but many permutations and options are available to policymakers.
