It seems like it's raining billions

<u>Jérôme Creel</u>, <u>Xavier Ragot</u>, and <u>Francesco Saraceno</u>

The second meeting of

the Eurogroup did the trick. The Ministers of Finance, after having once again laid

out their divisions on the issue of solidarity between euro area Member States on

Tuesday 7 April 2020, reached an agreement two days later on a <u>fiscal support plan</u>

that can be put in place fairly quickly. The health measures taken by the Member

States to limit the spread of the Covid-19 pandemic will enjoy better

short-term financing, which is good news. The additions to Europe's tools for

dealing with the crisis will be on the order of 500 billion euros — this is

certainly not negligible, and note that this comes on top of the efforts

already put in place by governments — but this corresponds mainly to a new

accumulation of debt by the Member States. The net gain for each of them, as we

shall see, is actually quite marginal.

The Eurogroup will

propose the creation of a credit line (Pandemic Crisis Support) specifically

dedicated to the management of the Covid-19 crisis within the framework of the

European Stability Mechanism (ESM), without strict conditionality (meaning that

recourse to the credit line will not imply any control on the part of the EMS

over the future management of the Member State's public finances). The creation

of the credit line was inspired by the proposal by <u>Bénassy-Quéré et al. (2020)</u>, the <u>advantages and disadvantages</u> of which we presented to the Eurogroup meeting on

9 April 2020. The amount allocated to this credit line represents around 2% of

the GDP of each euro area Member State, or nearly 240 billion euros (in 2019 GDP).

The lending mechanism

proposed by the European Commission to supplement the partial unemployment

programmes of the Member States — <u>it goes under the name of SURE</u> — will clearly see the light of day and will be endowed with 100 billion euros. For the record, the three main

beneficiaries of

SURE cannot receive a combined total of more than 60 billion euros in loans.

Finally, the European

Investment Bank (EIB) will grant an additional 200 billion euros, mainly to

small and medium-sized enterprises in the EU Member States. In total, the euro area

countries will have 480 billion euros in additional financing capacity.

Table 1 below

presents a breakdown by country of the amounts in play. As part of the 240

billion euros of Pandemic Crisis Support, Germany will be able to benefit from a borrowing capacity of nearly 70 billion euros, France nearly 50 billion

euros, and Italy and Spain 35 and 25 billion euros respectively. These amounts

correspond to 2% of the 2019 GDP of each country. At this point, there is no

indication of whether the Member States will draw on this capacity. The

advantage in doing so depends crucially on the difference between the interest

rate at which they can finance their health and economic expenses without using

the EMS and the interest rate on loans made by the EMS. The financing cost without

going through the EMS is the interest rate on the country's public debt. The

cost of financing through Pandemic Crisis Support is the interest rate at which

this credit line is itself financed, that is to say, at the lowest rate on the

market, i.e. the German rate. So it is obvious that Germany has no interest in

using this credit line. Of the 240 billion euros allocated to Pandemic Crisis

Support, the 70 billion euros for Germany is thus useless. For countries other

than Germany, the use of Pandemic Crisis Support depends on the difference between

their interest rate and Germany's rate, the infamous spread. If the spread is

positive, using the EMS effectively reduces the cost of borrowing. But as shown

in Table 1, the gain enabled by Pandemic Crisis Support is rather low. For

Greece, whose spread vis-à-vis Germany is the highest in the euro zone, the

gain would come to around 0.04% of GDP in 2019, i.e. a 215

basis point spread

multiplied by the amount allocated to Greece for Pandemic Crisis Support (3.8

billion euros, which corresponds to 2% of its GDP of 2019), all relative to its

2019 GDP. For Italy, the gain is on the same order: 0.04% of its GDP. Expressed

in euros, Italy stands to gain 700 million euros. For France, whose spread

vis-à-vis Germany is much lower than that of Italy, the gain could be 200

million euros, or 0.01% of its GDP in 2019.

Assuming that the amounts allocated by the EIB are prorated to the country's size (measured by its GDP in 2019), and that Spain, Italy and France benefit from 20 billion euros each under SURE, the total interest rate savings would reach, respectively, 680 million, 1.5 billion and 430 million euros (0.05%, 0.08% and 0.02% of GDP). At a time when it seems to be raining billions, these are not big savings. Unless you think of it as a metaphor. Like rain before it falls, the billions of euros are not really euros before they fall.

Table 1. Distribution of amounts allocated as part of Pandemic Crisis Support (PCS), and each country's potential gains, including from the use of additional EIB and SURE financing

	Max amount of PCS	10-year spreads	Max. gain from use of PCS and other additional financing				
			PCS	EIB*	SURE**	Total	Total
	Billion euros	Base points	Million euros				% of GDP
